farming and gardening

The living world offers abundance when met with **skills, knowledge and passion.**

We need to develop our understanding of how to treat the soil, plant, animal and environment with **sensitivity**

A **collaborative** approach to nature leads to AGRI- and HORTI-CULTURE

We believe, as humans we are part of the world and have to rediscover how to live in **harmony with nature.** We can develop side by side without exploitation. The biodynamic and organic approach are seeking new ways to regenerate and **develop together.**

The way we produce food and feed ourselves can also lead to a healthy and happy life, abundance in diversity, vibrant communities and a clean environment.

It's our choice...

feed the world

If you long to make a difference in the world...

We teach you **SKILLS** to grow food and look after our planet sustainably.

We offer you sense-experiences touching your **HEART.**

We challenge your **THINKING** to become imaginative.

feed yourself
